Projects • <https://jskrn.com/#projects>

Project 1 : CRUD-operations Based Application

GOOGLE KEEP CLONE – A note taking app

[React.js](#), [TypeScript](#), [Material UI](#) [Code](#) | [Documentation](#) | [Live Site](#)

- Developed using TypeScript with React.js framework with Material UI components library, CSS for styling.
- Enabled users to perform CRUD operations of creating, reading, updating and deleting on note items.
- Efficiently used advanced React features like hooks, custom hooks, state management, DOM access, React Router, and context, etc.
- Ensured type-safety through the usage of TypeScript.
- Followed modern practices of UI development by implementing a responsive design, with CSS Flexbox and Grid.
- Expertly incorporated and modified external UI components from the Material UI library into the development process.
- Effectively managed the source code with Git and GitHub repositories.
- Prepared extensive project documentation using Markdown.

Project 2 : API Based Application

WEATHER APP

[React.js](#), [TypeScript](#) [Code](#) | [Screenshots](#) | [Live Site](#)

- Developed using React.js and TypeScript, with CSS for styling, and Create React App development environment.
- Made use of Fetch API and an API key to fetch data from two different Open Weather APIs.
- Constructed all app components from scratch, without the use of an external component library.
- Current React.js practices incorporated to streamline the code.
- Applied and made custom modifications to SVG file for icons.
- Troubleshoot code using browser debugging tools.
- Used TypeScript for real time type checking.
